

Screws

1 Make a new document (100 x 100). Make a new layer. Draw a circle with the Elliptical Marquee tool. Save your selection (**Select>Save Selection>Click OK**)

2 Fill with medium gray. Feather by 4 pixels. Invert selection and press the "M" key. Now move the selection 2 pixels to the right and 2 pixels down, with the arrow keys on the keyboard. Now go to **Edit>Fill>100% White**, click OK.

3 Move selection up 4 pixels and to the left 4 pixels. Fill with black (**Edit> Fill>100% Black**)

4 Load "Alpha 1" (**Select>Load Selection>Click OK.**) Inverse selection and press delete.

5 Make a Vertical rectangular selection from the top of the circle to the bottom like shown. Fill with 60% Black (**Edit>Fill>60% Black**),

6 Move the selection 2 pixels to the right, Fill with 100% white. Move it back 2 pixels and fill with 60% Black and deselect.

7 Ok lets Brighten it up a little bit: Go to **Image>Adjust>Brightness**, I entered for Bright **+23** and Contrast **+12**, Click OK.

8 Last rotate, **Edit>Transform>Rotate**, Hold down shift and rotate it 45 degrees.

Finished

With a little filter tweaking and design, You can make some pretty cool stuff with these screws. Here's a little steel panel I made for this tutorial just to give you a example.
